Dear Hiring Team,

I'm applying for the Associate Product Manager role because I've already been doing the job — just without the title. I started in finance operations, but I couldn't stop noticing broken workflows and the cost they quietly imposed. So I stopped filing complaints about them and started shipping fixes. That instinct — find the highest-impact problem, scope it tightly, build, and measure — is what I want to do full-time on a product team.

At Sprouts Edu Tours, I owned end-to-end receivables of Rs 3 crore+ across 200+ tours. Living inside that workflow showed me the real problem: finance and ops ran on disconnected spreadsheets, reconciliation ate 10+ hours a week, and no one had a single source of truth. The team didn't need more headcount — it needed one connected system. So I built it.

Using AI dev tools, I independently designed, built and shipped a 13-module internal ERP — receivables and aging, invoicing, expenses, GST/TDS, budgeting, tour operations, P&L reporting and role-based access. It now runs daily across three branches (Mumbai, Hyderabad, Bangalore) for 20,000+ students. I owned the full product loop: problem framing through continuous user research, MVP scoping, iteration, adoption, and measured outcomes — manual work down 40% and reporting time down 50%.

What I bring to an APM team is that same loop applied deliberately: genuine user empathy from having lived the workflow, ruthless prioritisation, comfort with data and unit economics, and a relentless bias to ship. I'm early in my product career, but I've already carried a real product from zero to company-wide adoption on a live business — and I learn fast.

I'd welcome the chance to bring this operator-turned-builder mindset to your team. Thank you for your time and consideration.

Warm regards,

Nupur Raju Zarekar
